AADK TASK 2

Design & Document a Business Card Layout (Pre-Code)

MindMatrix

1. Business Card Concept

Concept Name:

My Developer Card

Title & Subtitle:

- Title: Sanjana S B
- Subtitle: Android Developer | UI/UX Enthusiast

Short Bio

Passionate about building clean and user-friendly Android apps using Jetpack Compose. Interested in UI design and modern mobile development.

Contact / Social Info:

- sanjana.dev@email.com
- +91 98765 43210
- github.com/sanjanasb

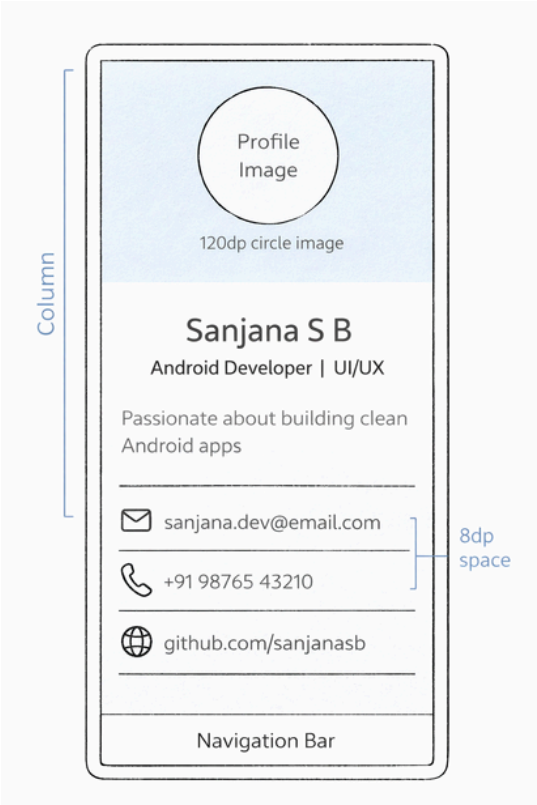
2. Wireframe

Mobile Layout Variant (Portrait)

Layout Structure Idea:
Image on top → Text below → Contact info at bottom



Wireframe [Mobile Layout Variant (Portrait)]

Composables Used:

```
Box (background)
   └──── Column (verticalArrangement = Center,
horizontalAlignment = CenterHorizontally)
        ├──── Image()
        ├──── Text()   // Title
        ├──── Text()   // Subtitle
        ├──── Text()   // Bio
        ├──── Column()
            ├──── Row() { Icon + Text }  // Email
            ├──── Row() { Icon + Text }  // Phone
            ├──── Row() { Icon + Text }  // GitHub
```

3. Resource & Style Plan

Image Plan:

- File name: profile_image.png (example)
- Folder: drawable-nodpi
- Shape: Circular or box (clip to circle)
- Optimized size: 512x512 px (compressed PNG)

Element	Font Size	Weight
Title	28sp	Bold
Subtitle	18sp	Medium
Bio	16sp	Normal
Contact Info	14sp	Normal

4. Accessibility Plan

- Add contentDescription = "Profile photo of Sanjana S B"
- Ensure contact rows have minimum 48dp height
- Maintain good contrast between text and background
- Use readable font size (minimum 14sp)
- Avoid overcrowding layout

5. Short Reflection

I chose a clean vertical layout because it looks professional and simple for a business card. I am mostly relying on Column, Row, and Modifier.padding to control spacing and alignment. Planning the tablet version helps me understand responsive design before coding. I will test this layout using preview and different emulator screen sizes to make sure spacing and readability look good.
