AADK TASK 3

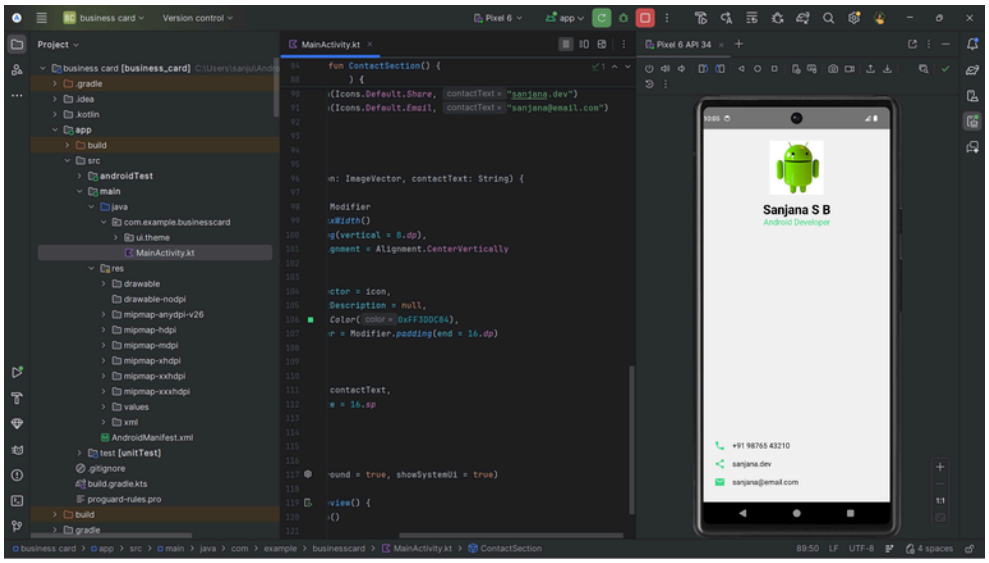
Layout Review & Improvement Plan of Your Business Card

MindMatrix

Screenshots

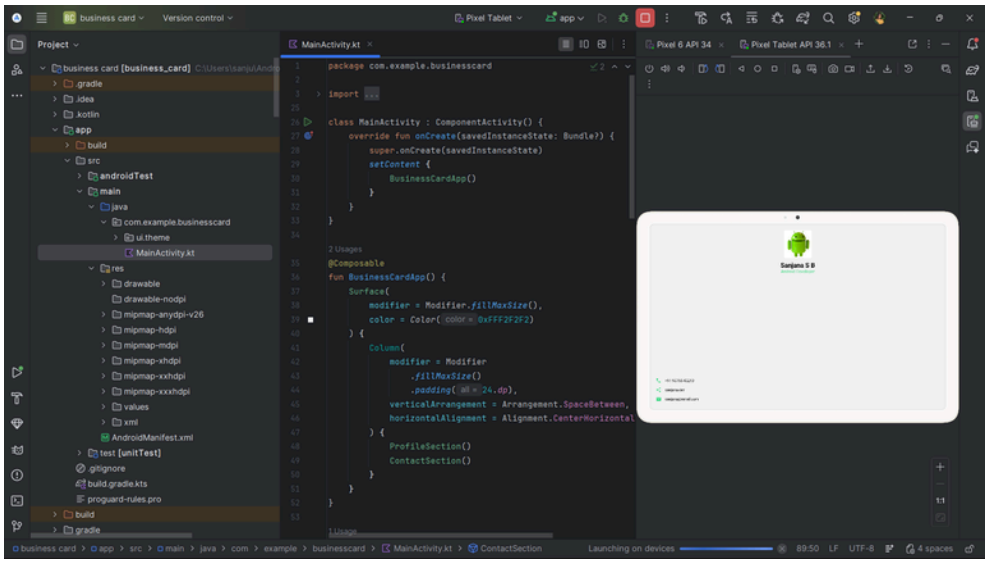
I reviewed my Developer Business Card layout in:

Phone Screen (Pixel 6 – Portrait Mode)



On phone, layout is vertically centered with image on top and contact details below.

Phone Screen (Pixel 6 – Portrait Mode)



On tablet, layout changes to horizontal arrangement (Image left, details right).

Layout Review Based on Criteria

A. Visual Alignment & Spacing

Phone Layout:

- Profile image is centered.
- Title and subtitle are aligned properly.
- Spacing between sections is mostly consistent.
- Contact rows have equal spacing (8dp between icon and text).

Issue Noticed:

- Bio text looked slightly close to subtitle.
- Contact section margin could be increased slightly.

B. Readability

- Title (28sp) → Clear and readable.
- Subtitle (18sp) → Good visibility.
- Bio (16sp) → Readable but slightly small on larger screens.
- Contact info (14sp) → Acceptable but may feel small.

Contrast Check:

- Dark text on light background → Good contrast.
- No visibility issues.

C. Resource Usage

- Profile image size: 512x512 px → Optimized.
- File placed in drawable-nodpi.
- PNG compressed before use.
- Icons used as vector assets (better scaling).

No major performance issue expected.

D. Responsiveness

Phone (Portrait):

- Clean vertical layout.
- All content fits properly.

Tablet / Landscape:

- Switched to Row layout.
- Image on left, details on right.
- Large empty margins on wide screen.

Improvement Needed:

- Add max width constraint.
- Possibly center content inside larger screen.
- Adjust spacing for large displays.

E. Accessibility & Usability

- Added contentDescription for profile image.
- Icons labelled properly.
- Contact rows minimum height = 48dp.
- Padding added around clickable areas.

Possible improvement:

- Increase contact text size slightly.
- Ensure touch targets are fully accessible.

Improvement Plan Table

Issue Identified	Proposed Fix	Priority
Bio text slightly close to subtitle	Add 12dp extra spacing	Medium
Contact text (14sp) slightly small	Increase to 16sp	High
Tablet layout too wide	Add maxWidth (600dp) and center content	High
Large empty space on tablet	Use Arrangement.SpaceEvenly	Medium
Subtitle color slightly light	Darken color for better contrast	Low
Improve image loading	Use rememberAsyncImagePainter (if remote image)	Low

Mini Improvement Strategy

Before Final Submission:

- Increase contact text size.
- Adjust spacing values.
- Test on 5" screen and 10" tablet.
- Check contrast using accessibility tools.

During Code Update:

- Apply Modifier.widthIn(max = 600.dp)
- Use consistent padding (16dp standard)
- Recheck touch targets using Layout Inspector

Reflection

Through this review, I learned that even a simple layout can have many small improvements. Spacing, font size, and responsiveness matter a lot for professional UI design. Testing on different screen sizes helped me understand how Compose layouts adapt. In future projects, I will always review alignment, accessibility, and responsiveness before finalizing my UI.
